

# Day:6 Tutorial: From Excel workbook to stunning report in Power BI Desktop

Your manager wants to see a report on your latest sales figures. They've requested an executive summary of:

- Which month and year had the most profit?
- Where is the company seeing the most success (by country/region)?
- Which product and segment should the company continue to invest in?

Using our sample finance workbook, we can build this report in no time. Here's what the final report will look like. Let's get started!

In this tutorial, you'll learn how to:

Download sample data.  
Prepare your data with a few transformations.  
Build a report with a title, three visuals, and a slicer.  
Publish your report to the Power BI service so you can share it with your colleagues.

## Prerequisites

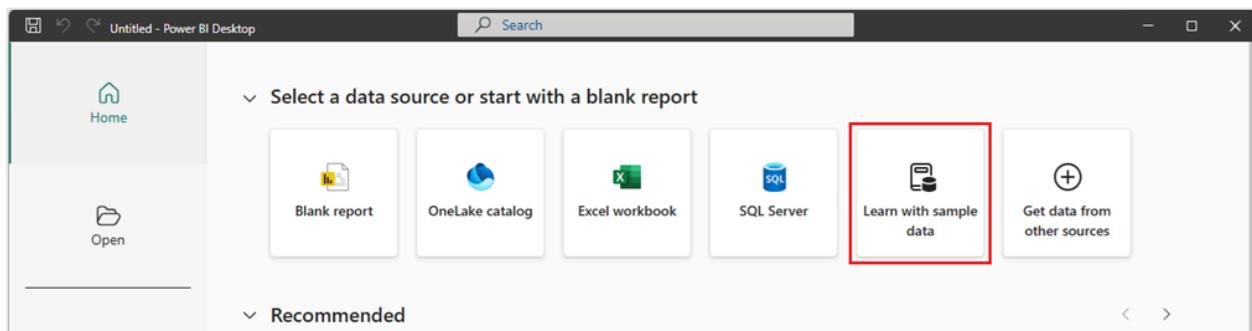

- Before you start, you need to [download Power BI Desktop](#).
- If you're planning to publish your report to the Power BI service and you aren't signed up yet, [sign up for a free trial](#).

## Get data

You can get the data for this tutorial using one of two methods: connect to the sample directly from Power BI Desktop, or download and open it in Power BI Desktop.

### Get data in Power BI Desktop

When you open Power BI Desktop, select Learn with sample data from the Home page.

In the dialog that opens, choose Load sample data.

Two ways to use sample data

Take a tutorial online

Learn how to create a robust report, step-by-step.

Launch tutorial

Experiment on your own

To start creating visuals on your own, load sample data.

## Download the sample

You can also download the sample workbook directly.

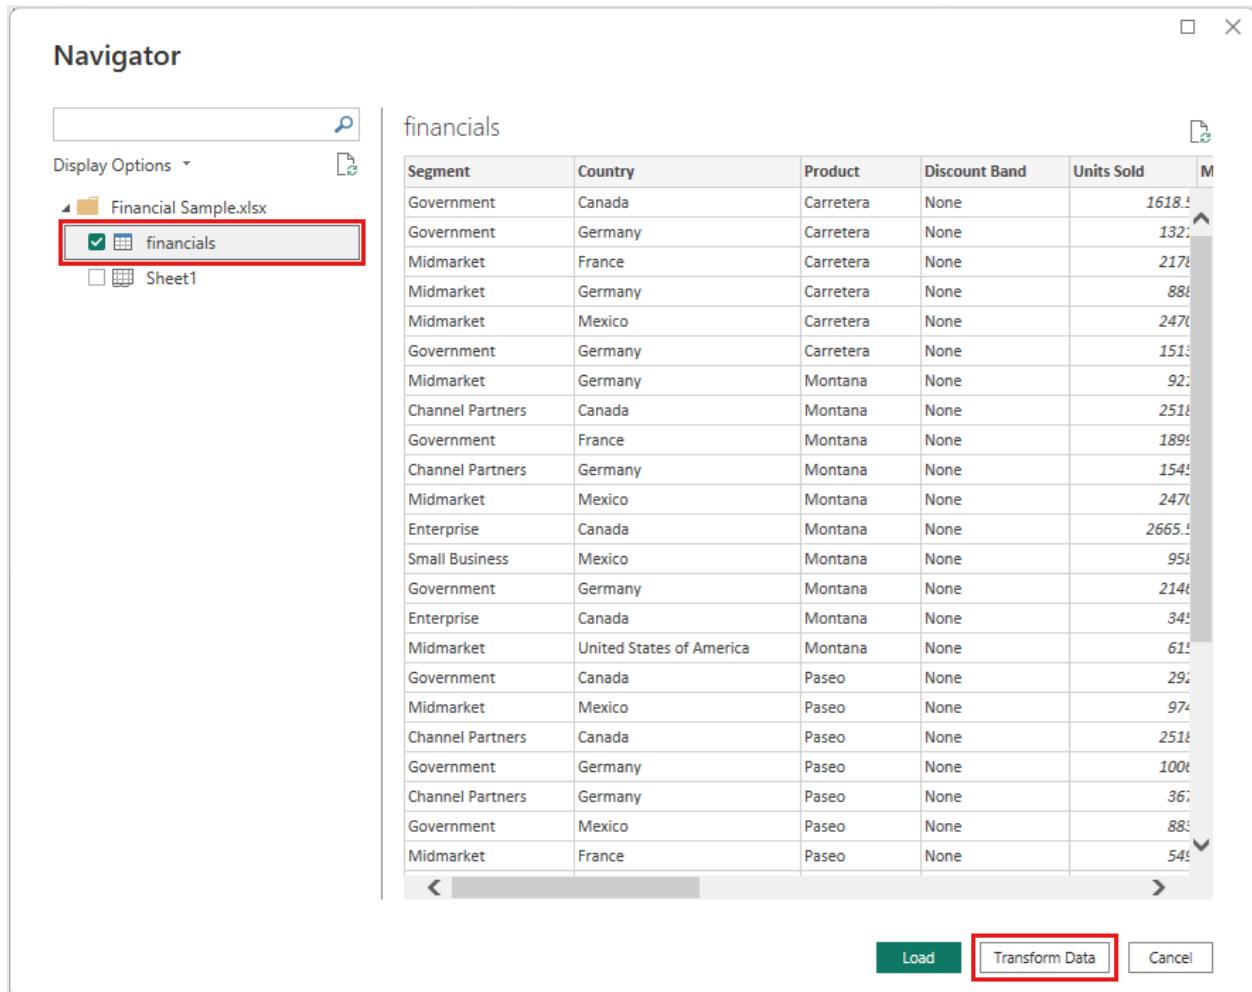

1. Download the Financial Sample Excel workbook.
2. Open Power BI Desktop.
3. On the Home page, select Excel workbook.
4. Navigate to where you saved the sample workbook and select Open.

## Prepare your data

In Navigator, you have the option to *transform* or *load* the data. The preview lets you verify you have the expected range and detected data types. If you need to make changes, transform your data before loading. To make the visualizations easier to read later, we want to transform the data

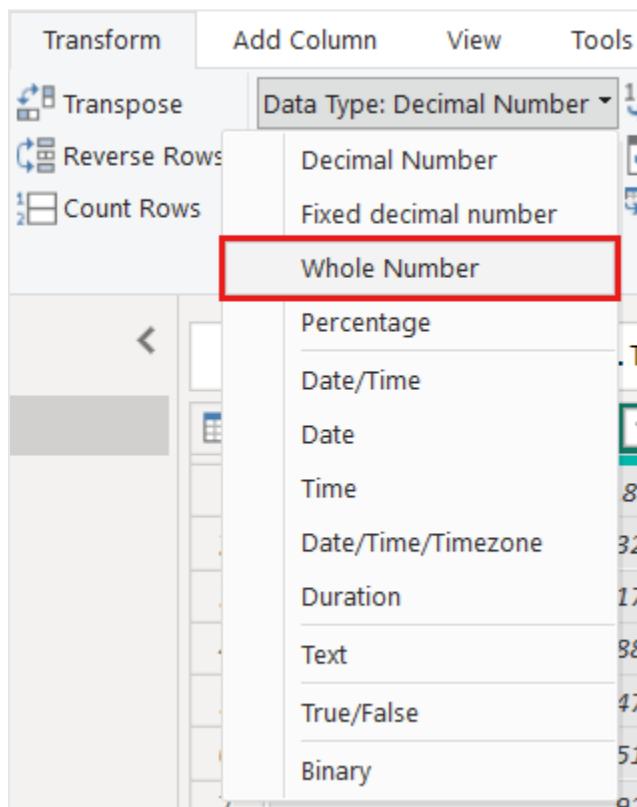

for this exercise. As you make each transformation in Power Query Editor, you see it added to the list under Query Settings in APPLIED STEPS.

1. Select the checkbox for the financials table, then select Transform Data.

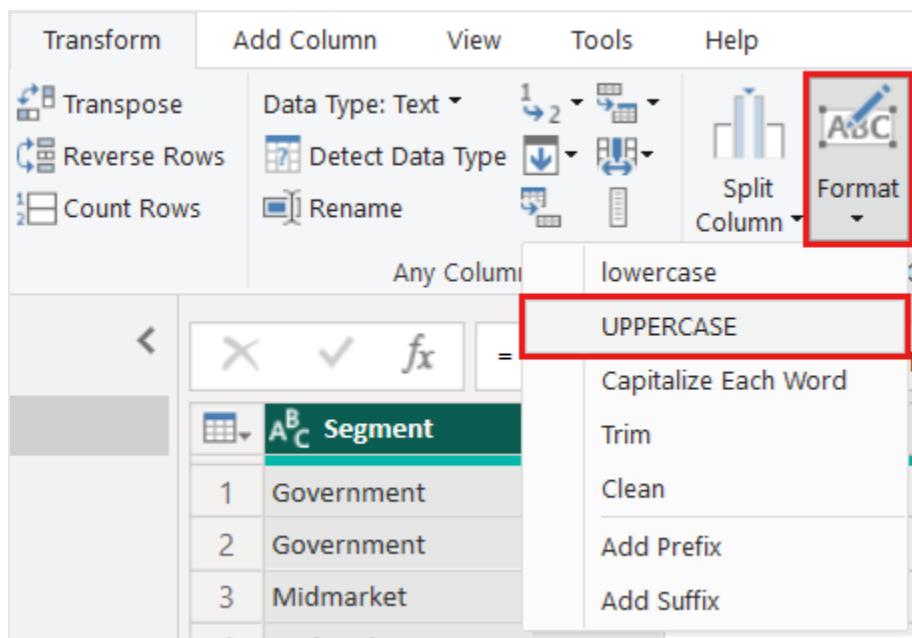

2. The Power Query Editor opens. Select the Units Sold column. On the Transform tab, select Data Type, then select Whole Number. In the Change Column Type dialog that opens, choose Replace current. Changing data types is the data cleaning step that users do most often. In this case, the units sold are in decimal form. It doesn't make sense to have 0.2 or 0.5 of a unit sold, so we changed it to a whole

number.

3. We want to make the segments easier to see in the chart later, so let's format the data in the Segment column. Select the Segment column. On the Transform tab, select Format, then select UPPERCASE.

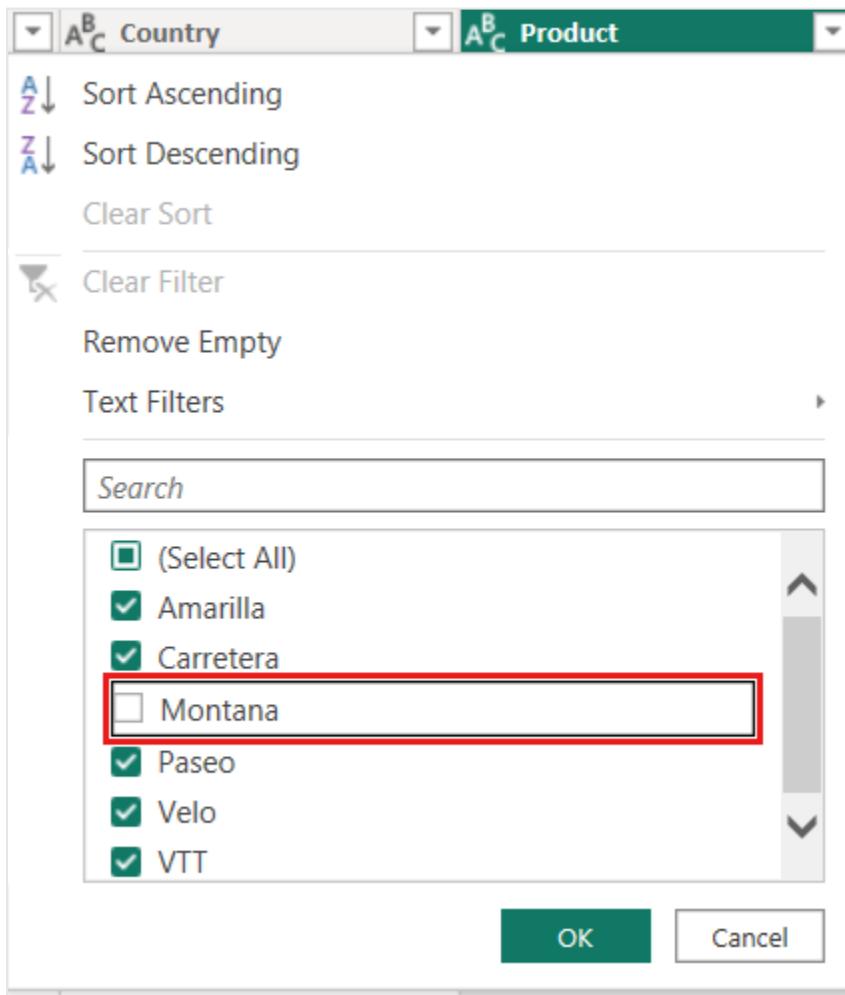

4. Let's shorten the column name from Month Name to just Month. Double-click the Month Name column, and rename it to Month.

	Month Name	
1	January	
6	June	
6	June	
6	June	

5. On the Product column header, select the dropdown and clear the box next to Montana.

We know the Montana product was discontinued last month, so we want to filter this data from our report to avoid confusion.

6. You can see that each transformation has been added to the list under Query Settings in APPLIED STEPS.

7. Back on the Home tab, select Close & Apply. Our data is almost ready for building a report.  
The sigma symbol in the Data list indicates a field that Power BI has detected is numeric. Power BI uses a calendar symbol to denote a

date field.

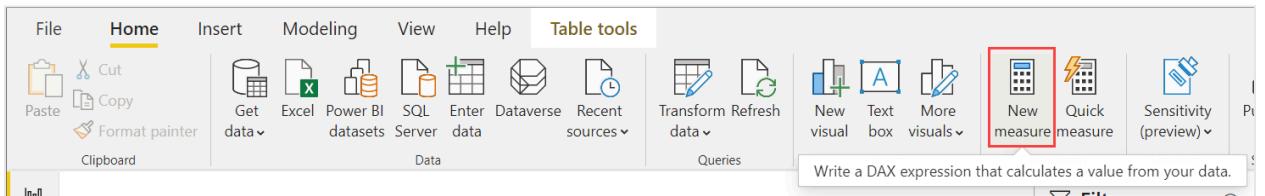

The screenshot shows the 'Data' view in Power BI. At the top, there's a search bar labeled 'Search'. Below it, under the heading 'financials', there are several items: 'Sales' (with a red box around it), 'COGS' (with a red box around it), 'Country', 'Date' (with a red box around it), 'Discount Ba...', 'Discounts' (with a red box around it), 'Gross Sales' (with a red box around it), 'Manufactur...' (with a red box around it), and 'Month'. The 'Date' item is expanded, showing its sub-items: 'Date', 'Discount Ba...', 'Discounts', 'Gross Sales', and 'Manufactur...'. The other items are collapsed, indicated by a triangle icon to the left of their names.

## Extra credit: Write two expressions in DAX

Writing *measures* and creating *tables* in the *DAX* formula language is super powerful for data modeling. There's lots to learn about DAX in the Power BI documentation. For now, let's write a basic expression to create a new measure, and another expression to create a whole table.

## Create a new measure

1. On the Home ribbon, select New measure.

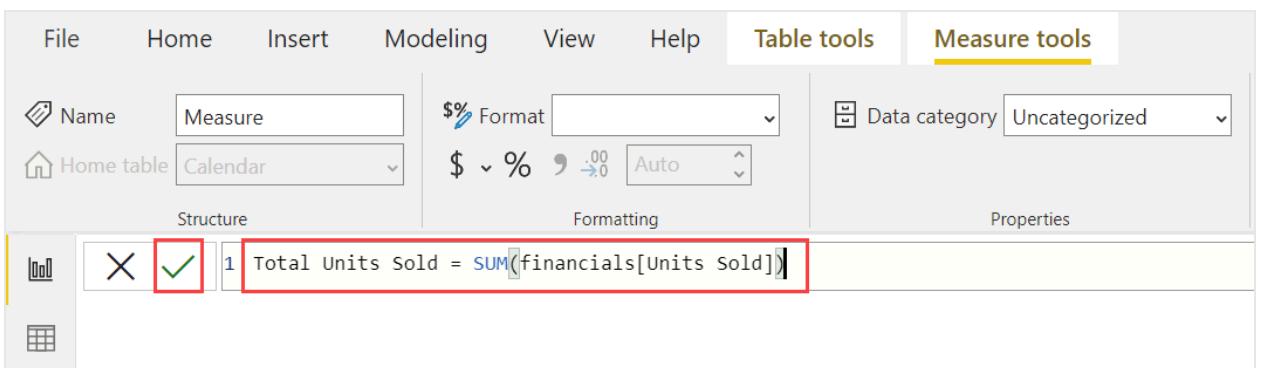

2. Copy and paste this expression in the formula bar at the top of the report canvas to add all the numbers in the Units Sold column.
3. DAX

Total Units Sold = `SUM(financials[Units Sold])`

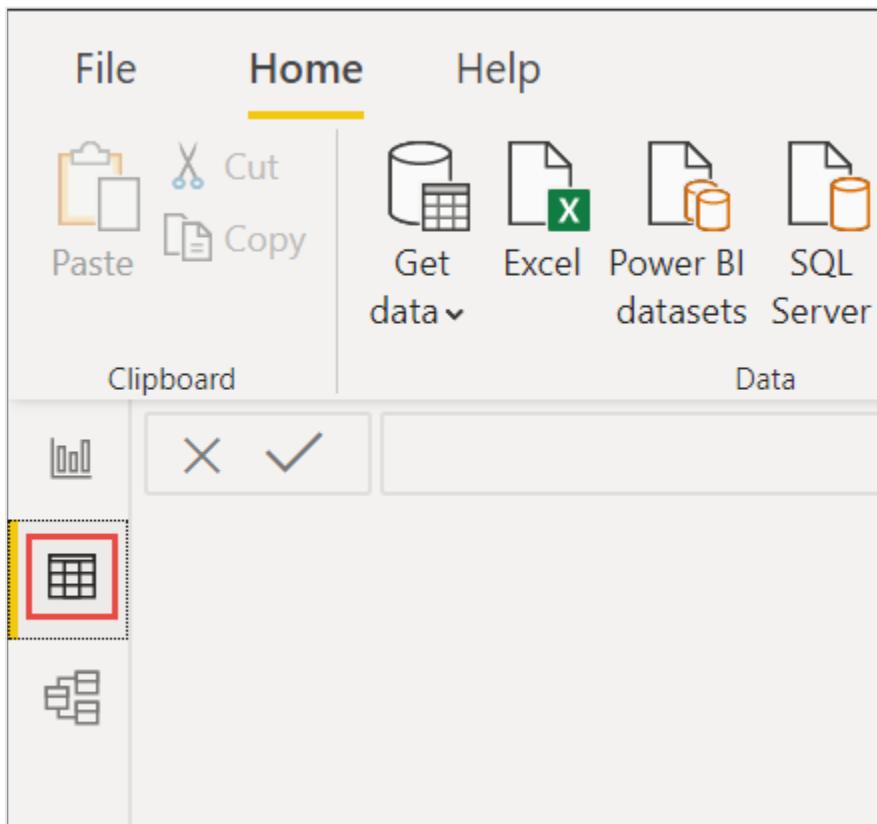

- 4.

5. Select the check mark to commit. The measure is added to the list in the Data pane.

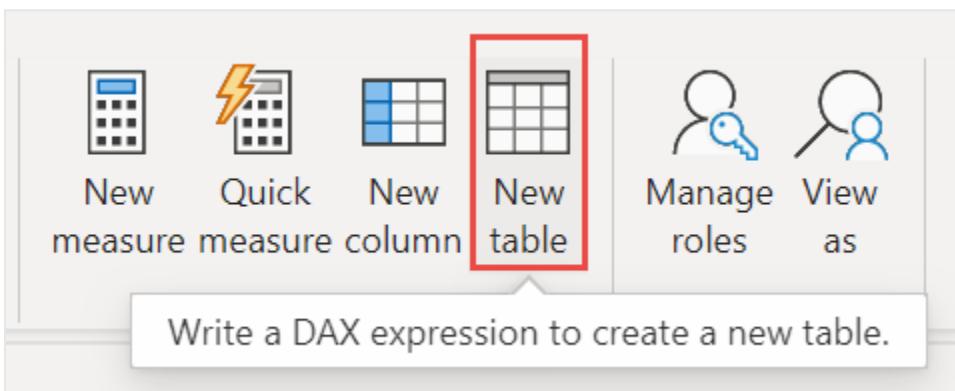

## Create a new table

1. Now select the Table view icon on the left.

2. On the Home ribbon, select New table.

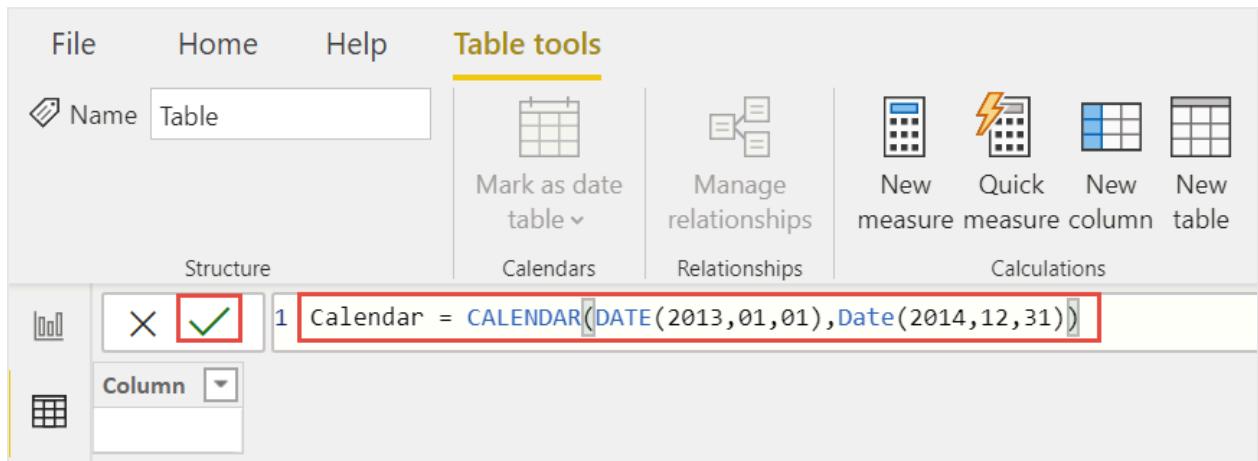

3. Copy and paste this expression in the formula bar to generate a Calendar table of all dates between January 1, 2013, and December 31, 2014.

#### 4. DAX

```
Calendar = CALENDAR(DATE(2013,01,01),DATE(2014,12,31))
```

5.

6. Select the check mark to commit.

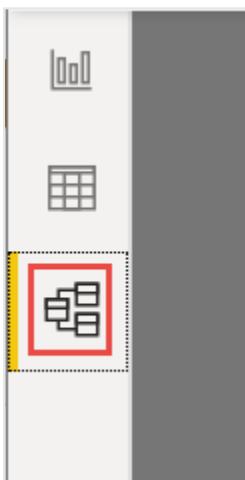

Here are the first 23 rows of the single-column table you just created.

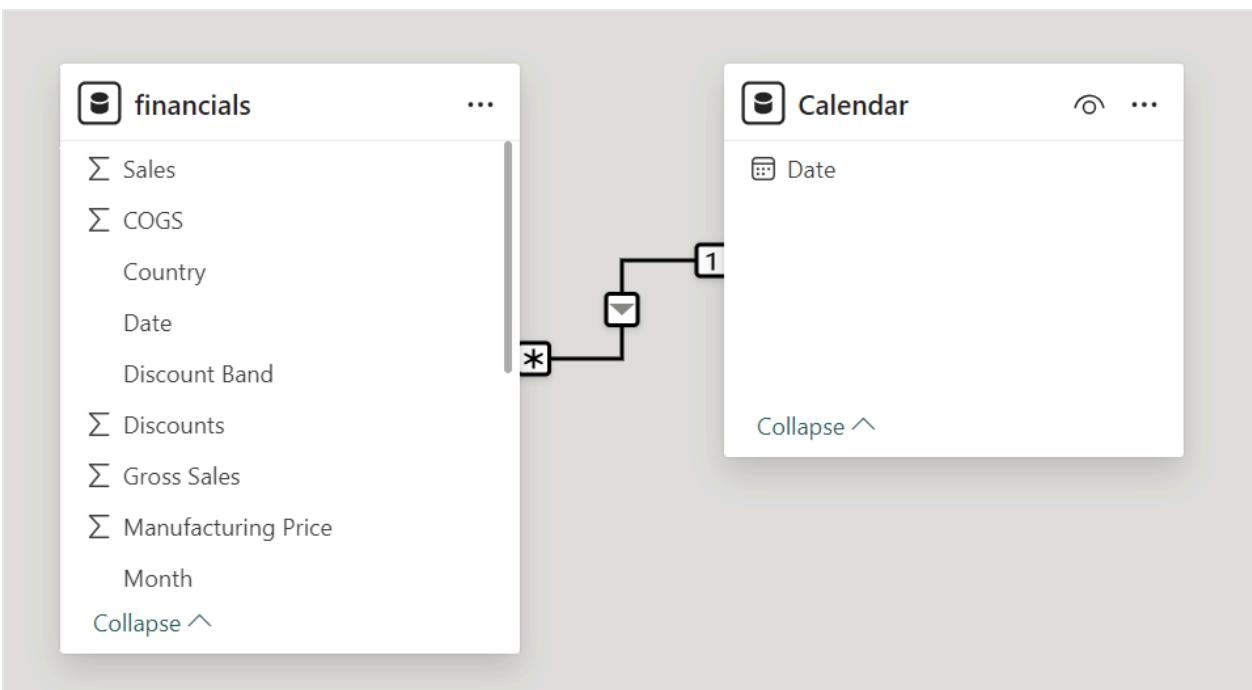

The screenshot shows the Microsoft Power BI Data Editor interface. The top navigation bar includes File, Home (selected), Help, and Table tools. Under Home, there are icons for Paste, Cut, Copy, Get data, Excel, OneLake, SQL Server, Enter data, Dataverse, Recent sources, Transform, Refresh data, and Queries. The main area displays a table with a single column named "Date". The table has 23 rows, each containing a date from January 1, 2013, to January 23, 2013, at 12:00:00 AM. On the left side, there are three vertical tabs: a grid icon, a DAX icon, and another grid icon. The DAX icon is currently selected. The formula bar at the top shows the DAX code: `1 Calendar = CALENDAR(DATE(2013,01,01),DATE(2014,12,31))`.

Date
1/1/2013 12:00:00 AM
1/2/2013 12:00:00 AM
1/3/2013 12:00:00 AM
1/4/2013 12:00:00 AM
1/5/2013 12:00:00 AM
1/6/2013 12:00:00 AM
1/7/2013 12:00:00 AM
1/8/2013 12:00:00 AM
1/9/2013 12:00:00 AM
1/10/2013 12:00:00 AM
1/11/2013 12:00:00 AM
1/12/2013 12:00:00 AM
1/13/2013 12:00:00 AM
1/14/2013 12:00:00 AM
1/15/2013 12:00:00 AM
1/16/2013 12:00:00 AM
1/17/2013 12:00:00 AM
1/18/2013 12:00:00 AM
1/19/2013 12:00:00 AM
1/20/2013 12:00:00 AM
1/21/2013 12:00:00 AM
1/22/2013 12:00:00 AM
1/23/2013 12:00:00 AM

7. Now select Model view on the left.

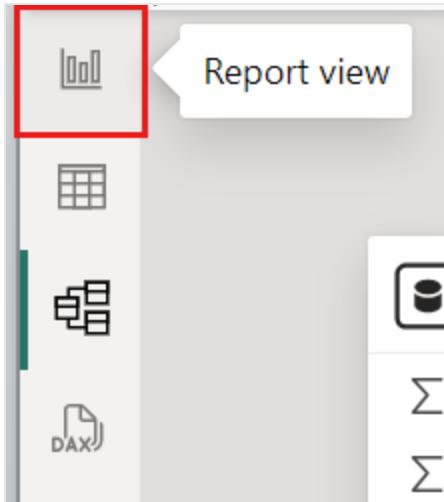

8. Drag the Date field from the financials table to the Date field in the Calendar table to join the tables and create a *relationship* between them. In the New relationship dialog that opens, select Save to apply the selections that Power BI automatically filled in for you.

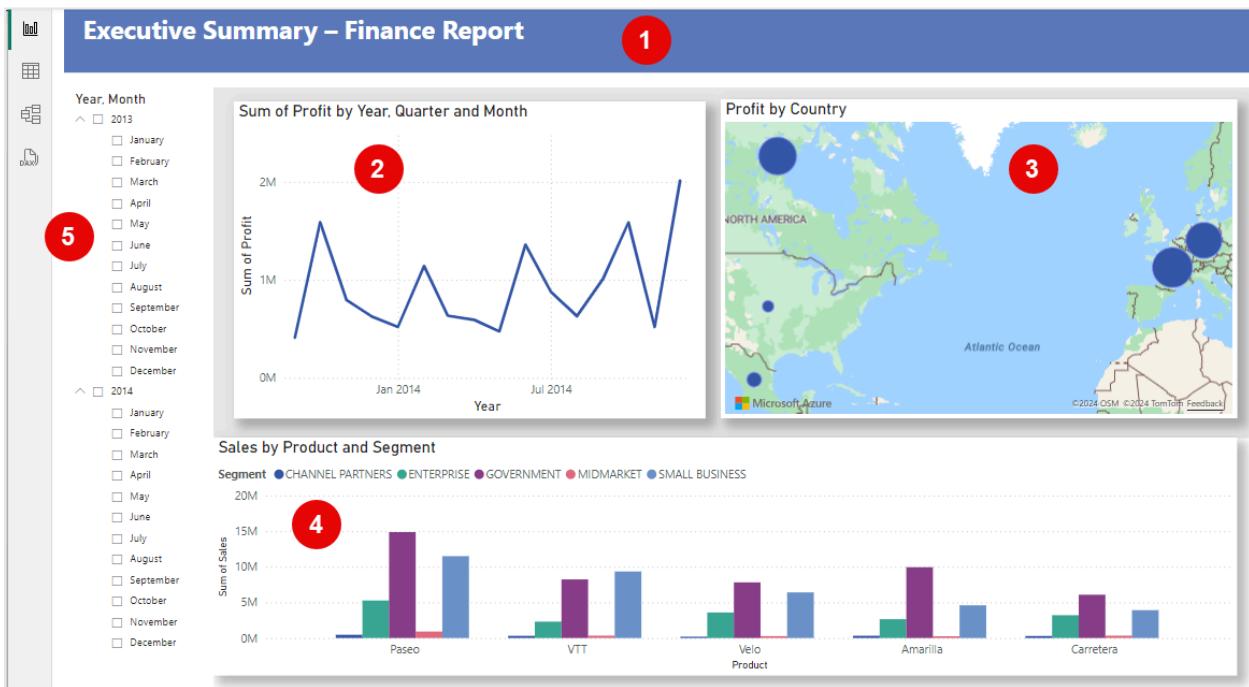

## Build your report

Now that you've transformed and loaded your data, it's time to create your report. In the left rail, select Report view.

In the Data pane on the right, you see the fields in the data model you created.

Let's build the final report, one visual at a time.

## Visual 1: Add a title

1. On the Insert ribbon, select Text box. Inside the text box, type “Executive Summary – Finance Report”.

2. Select the text you typed. Make the font bold and set the size to 20.

3. Resize the box to fit on one line.

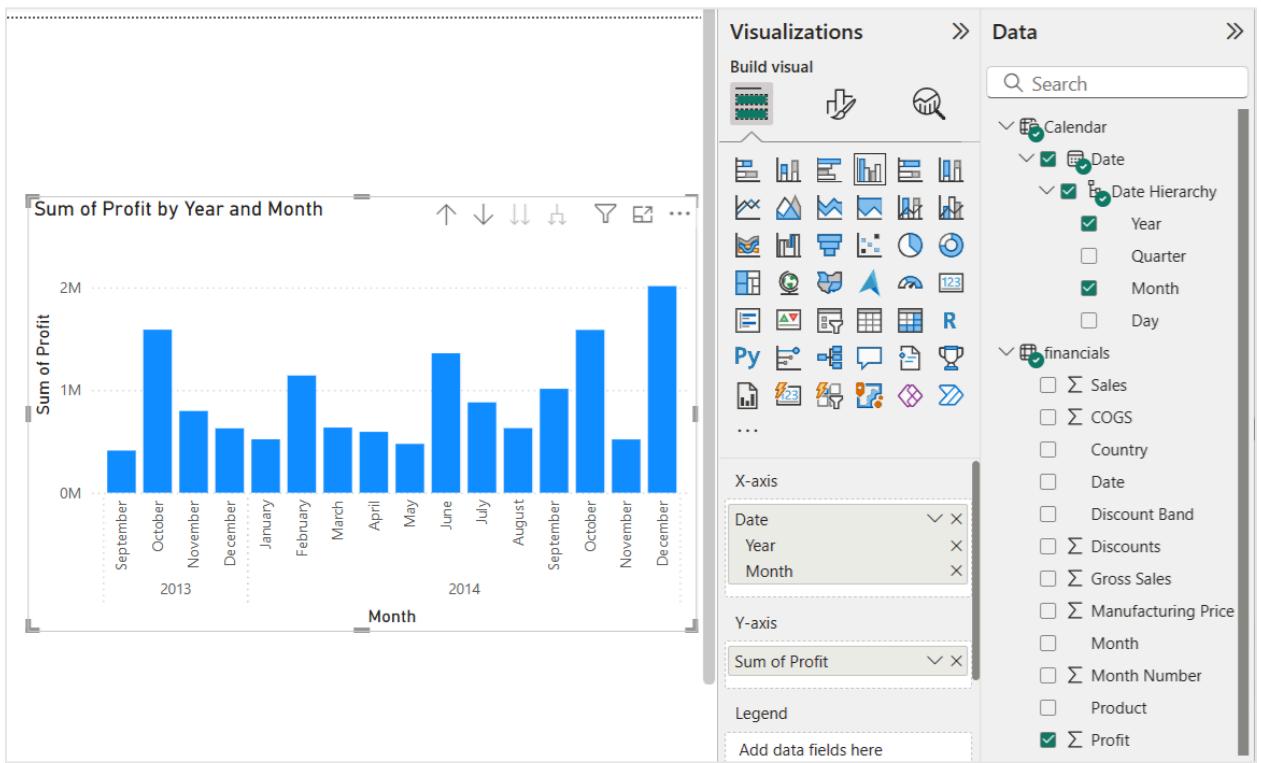

## Visual 2: Profit by date

Now you create a line chart to see which month and year had the highest profit.

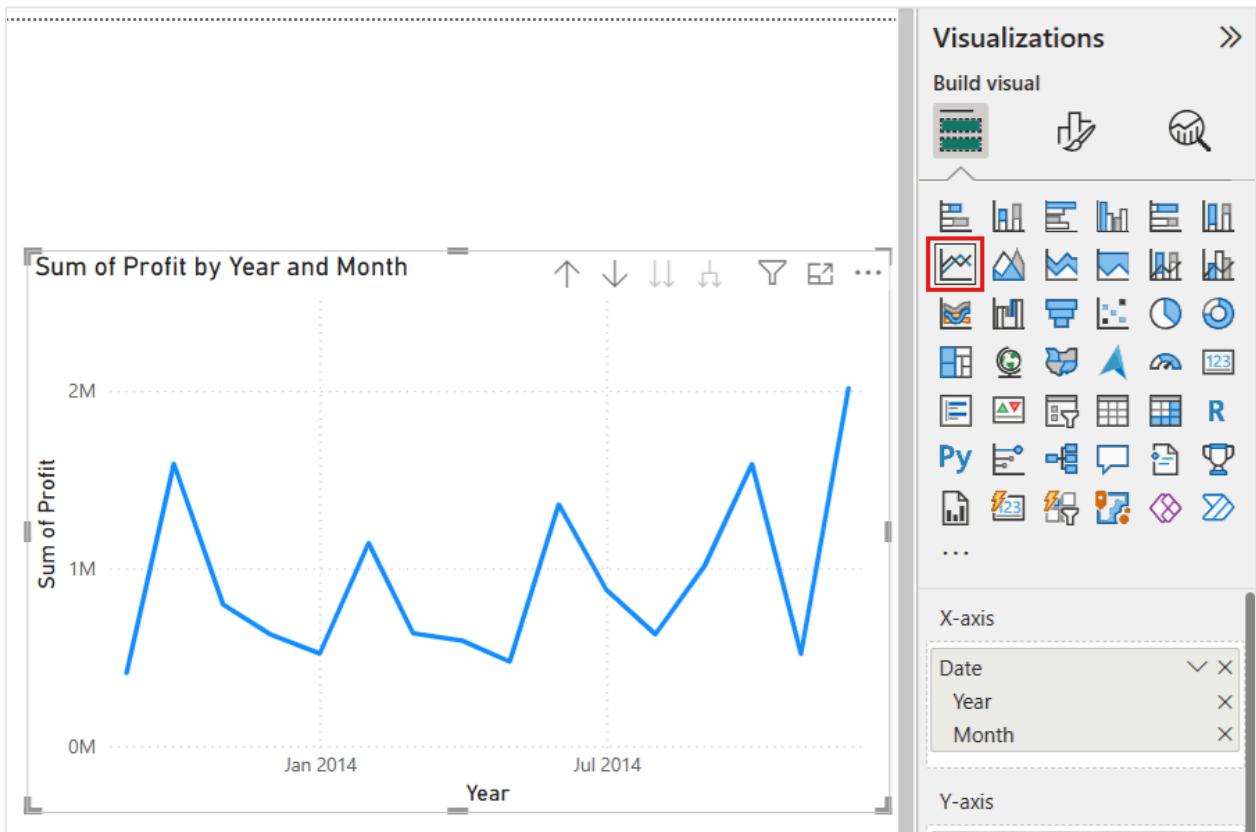

1. From the Data pane, drag the Profit field to a blank area on the report canvas. By default, Power BI displays a column chart with one column, Profit.
2. Drag the Date field to the same visual. Power BI updates the column chart to show monthly profit for the two years.

If you created a Calendar table in Extra credit: Create a new table earlier in this article, expand the Date field in the Data pane, then select the checkbox for Date Hierarchy. Expand the field, then clear the checkboxes next to the Quarter and Day fields to display only Year and Month on the chart. Alternatively, remove the fields from where they're listed in the X-axis well on the Build visual tab of the

## Visualizations pane.

3. On the Build visual tab, change the visualization type to Line chart.

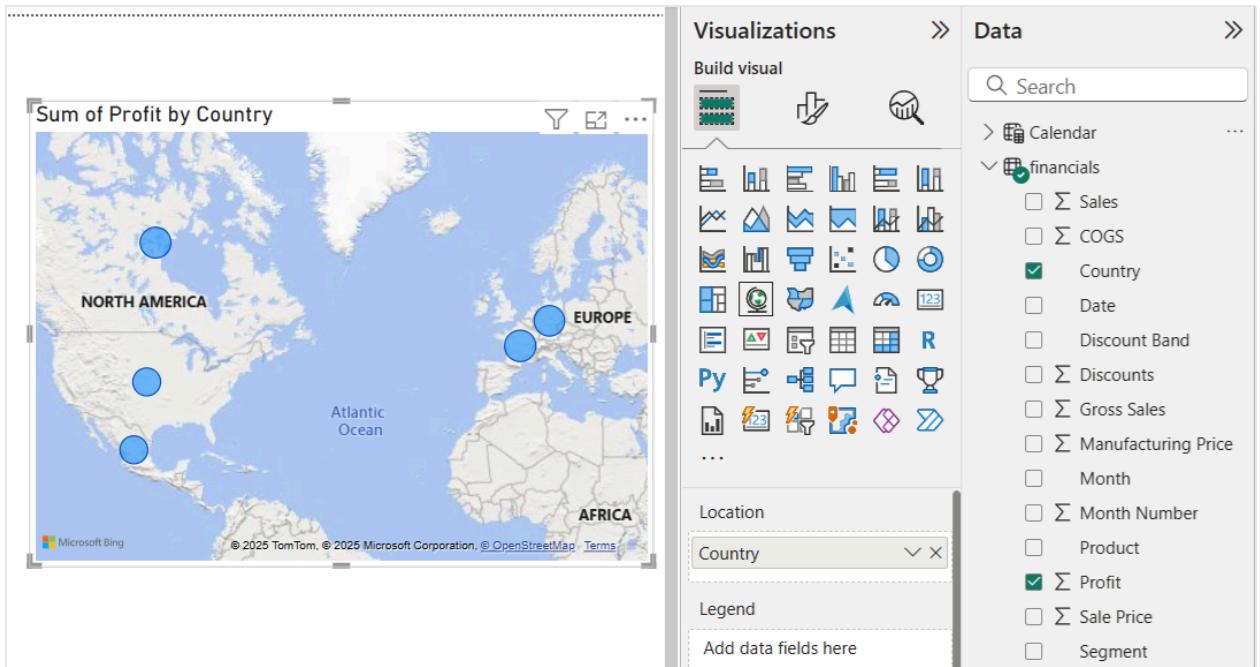

Now you can easily see that December 2014 had the highest profit.

### Visual 3: Profit by country/region

Create a map to see which country/region had the highest profits.

1. From the Data pane, drag the Country field to a blank area on your report canvas to create a map.
2. Drag the Profit field to the map.  
Power BI adds bubbles representing the relative profit of each location to the map visual.

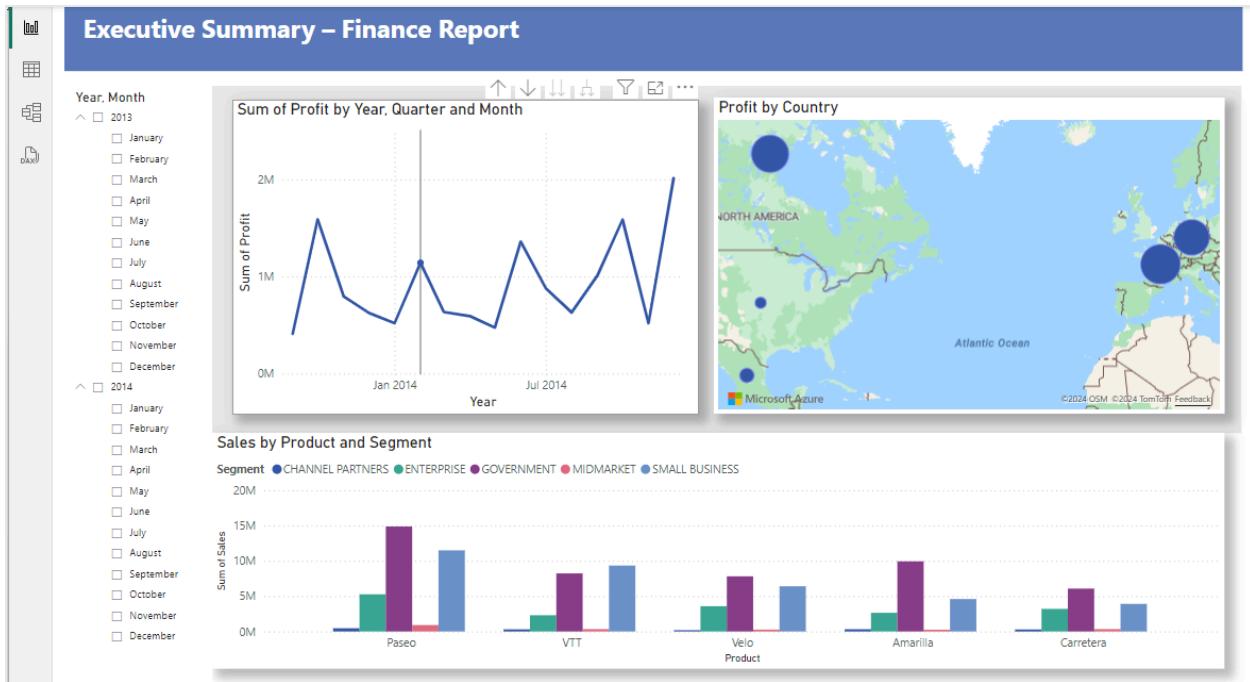

Europe seems to be performing better than North America.

## Visual 4: Sales by product and segment

Create a bar chart to determine which companies and segments to invest in.

1. Drag the two charts you've created to be side by side in the top half of the canvas. Save some room on the left side of the canvas.
2. Select a blank area in the lower half of your report canvas.
3. In the Data pane, select the Sales, Product, and Segment fields. Power BI automatically creates a clustered column chart visualizing the data.
4. Drag the handles on the chart so it's wide enough to fill the space under the two other visuals.

It looks like the company should continue to invest in the Paseo product and target the Small Business and Government segments.

## Visual 5: Year slicer

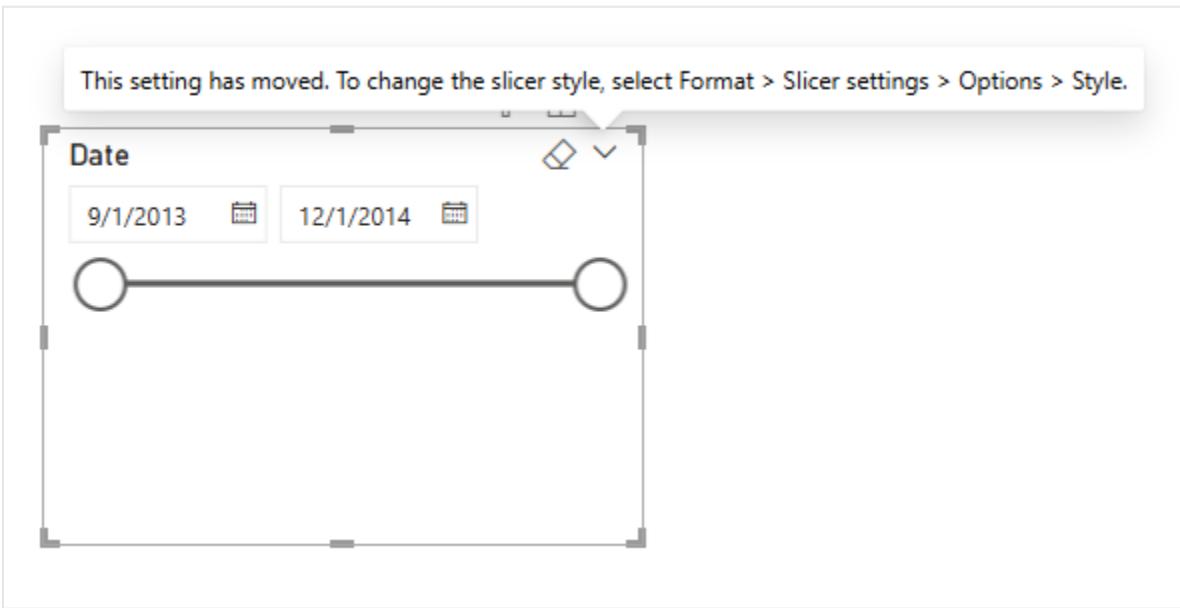

Slicers are a valuable tool for filtering the visuals on a report page to a specific selection. In this case, we can create two different slicers to narrow in on performance for each month and year. One slicer uses the Date field in the original table. The other uses the Date table you may have created for "extra credit" earlier in this tutorial.

Date slicer using the original table

1. In the Data pane, select the Date field in the financials table. Drag it to the blank area you reserved on the canvas.
2. In the Visualizations pane, choose Slicer. Select the Slicer visual (funnel icon). Power BI automatically creates a numeric range slicer.

When you choose Slicer for the visual, you see the following image:

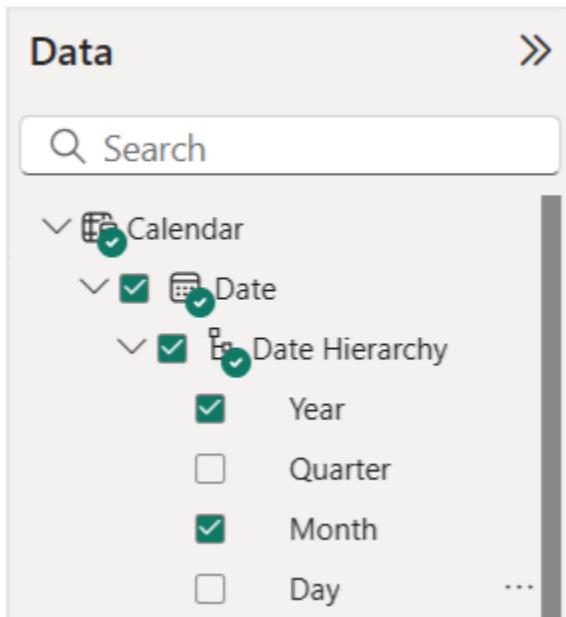

3. You can drag the ends to filter the date range. You can also change to a different type of slicer on the Visualization pane's Format visual tab. The options are under Visual > Slicer settings > Options > Style.

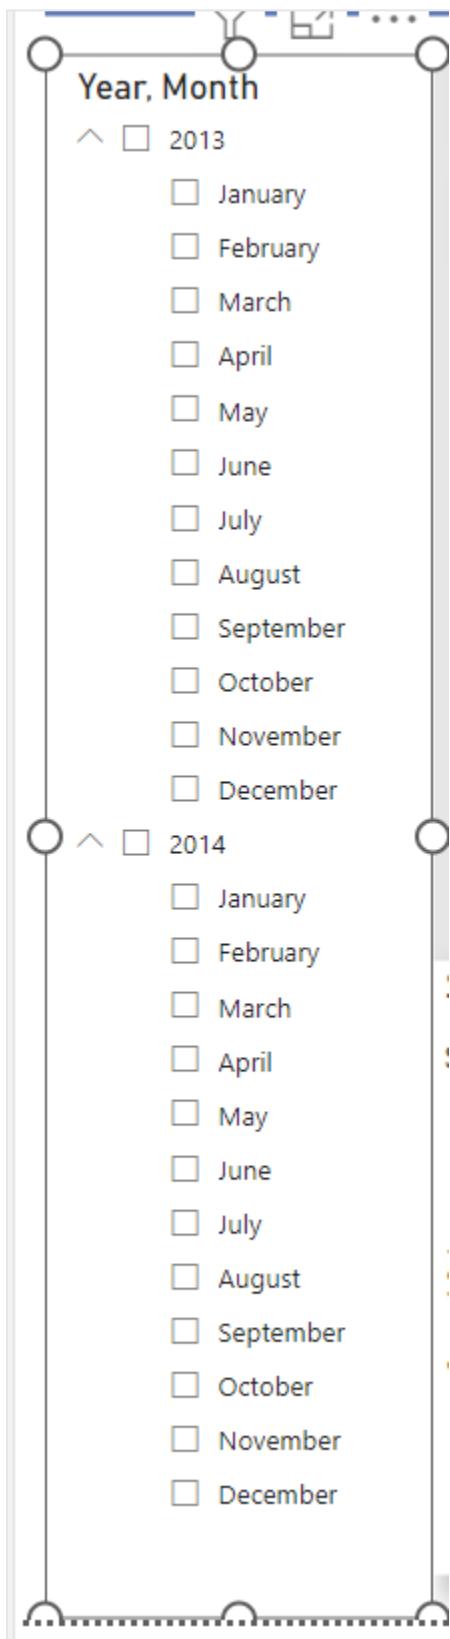

#### Date slicer using the DAX table

1. In the Data pane, select the Date field in the Calendar table. Drag it to the blank area on the canvas.
2. On the Visualizations pane's Build visual tab, choose Slicer.

3. In the Data pane, expand the Date field and clear the boxes for Quarter and Day so only Year and Month are left.

4. Expand each year and resize the visual so that all months are visible.

We'll use this slicer in the finished report.

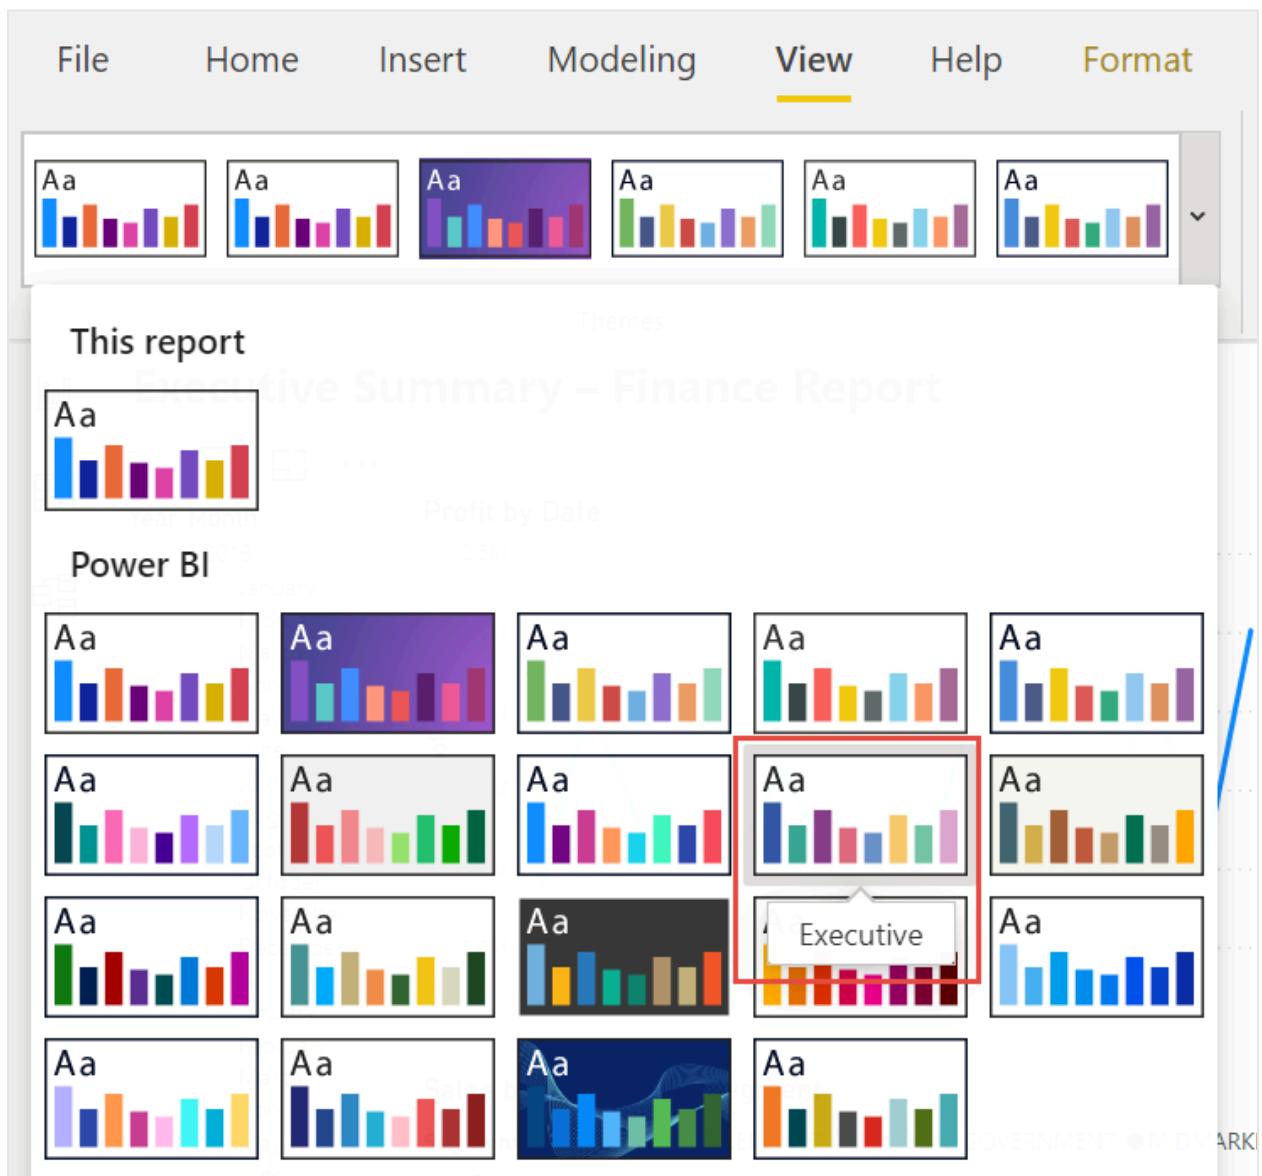

Now, if your manager asks to see just 2013 data, you can use the slicer to select that year, or specific months of that year.

### **Extra credit: Format the report**

If you want to do some light formatting on this report to add more polish, here are a few easy steps.

Theme

- On the View ribbon, change the theme to Executive.

Spruce up the visuals

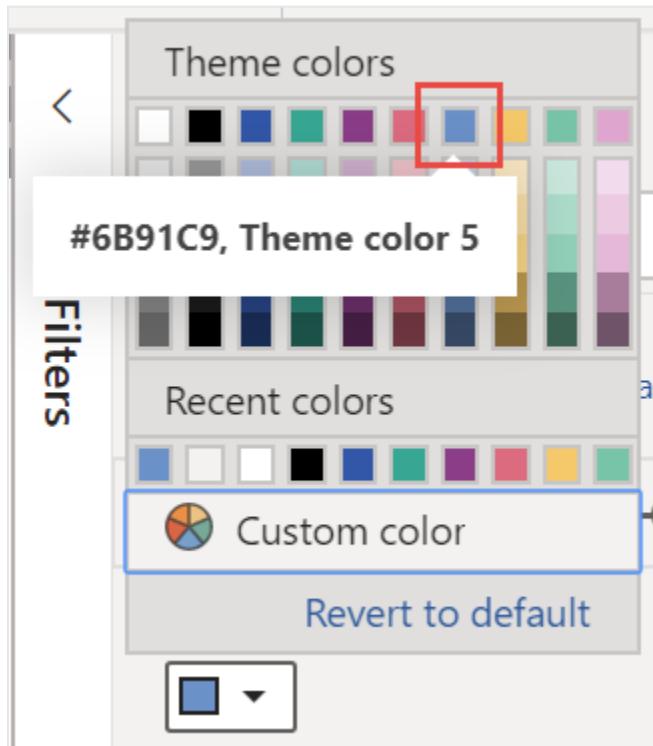

With the appropriate visual selected, make the following changes on the Visualizations pane.

- Select Visual 2, the column chart showing profit over time. Under Format visual > General, expand the Title section. Change the text in the Text field to “**Profit by Month and Year**” and change the Font size to 16. Expand Effects and toggle Shadow to On.

2. Select Visual 3, the map. Under Format visual > Visual, expand Map settings and Style, then choose Grayscale. Under Format visual > General, expand the Title section and change the Font size to 16. Expand Effects and toggle Shadow to On.
3. Select Visual 4, the clustered column chart showing sales by product and segment. Under Format visual > General, expand the Title section. Change the Font size to 16. Expand Effects and toggle Shadow to On.
4. Select Visual 5, the year slicer. Under Format visual > Visual, expand Slicer settings > Selection and toggle Show "Select all" option to On. In the Slicer header section, increase the Font size to 16.

### Add a background shape for the title

1. On the Insert tab in the ribbon at the top, select Shapes > Rectangle. Place it at the top of the page and adjust the dimensions to be the width of the page and height of the title.
2. In the Format shape pane, under Shape, expand the Style section and set Border to Off.
3. In the Fill section, change Color to Theme color 5 #6B91C9 (blue).

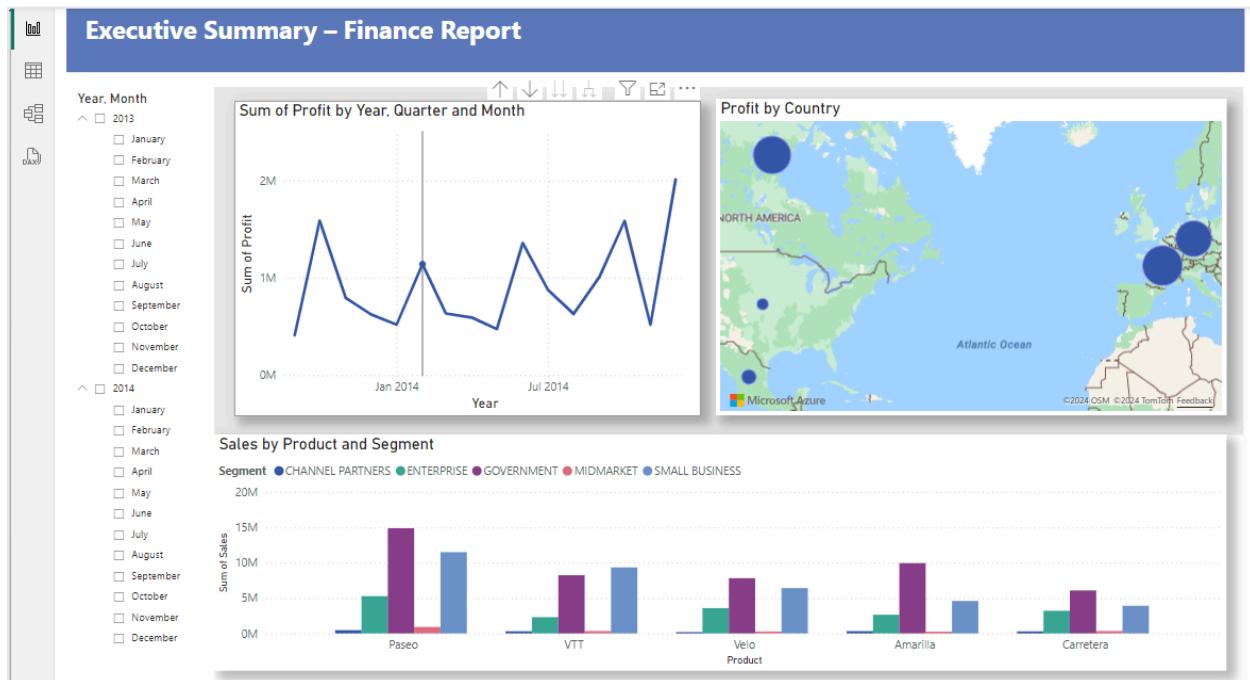

- On the Format tab in the ribbon, select Send backward > Send to back to position the shape behind the title text.
- Select the text in Visual 1, the title, and change the font color to White.

Add a background shape for Visuals 2 and 3

- On the Insert tab in the ribbon at the top, select Shapes > Rectangle, then adjust the dimensions to be the width and height of Visuals 2 and 3.
- In the Format shape pane, on the Shape tab, expand the Style and Border sections and change the Transparency value to 100%.
- In the Fill section, set the Color to White, 10% darker.
- On the Format tab in the ribbon, select Send backward > Send to back to position the rectangle behind the visuals.

## Finished report

Here's how your final, polished report will look:

In summary, this report answers your manager's top questions:

- Which month and year had the most profit?  
**December 2014.**
- Which country/region is the company seeing the most success in?  
**In Europe, specifically France and Germany.**
- Which product and segment should the company continue to invest in?  
The company should continue to invest in the **Paseo product** and target the **Small Business and Government segments**.

## Save your report

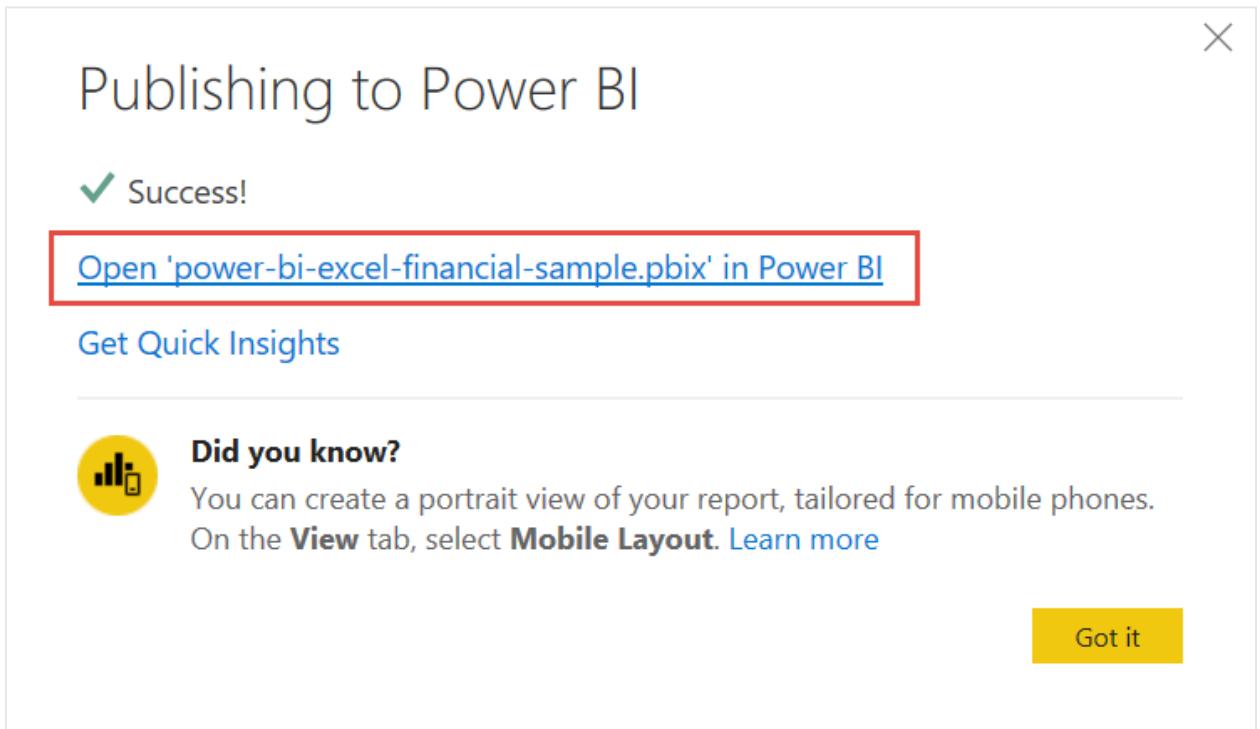

- On the File menu, select Save, or hold Ctrl and then press the S key. If you're saving the report for the first time, you're prompted for a name and location to save it to.

## Publish to the Power BI service to share

To share your report with your manager and colleagues, publish it to the Power BI service. When you share with colleagues that have a Power BI account, they can interact with your report, but can't save changes.

1. In Power BI Desktop, select Publish on the Home tab.  
You might need to sign in to the Power BI service. If you don't have an account yet, you can [sign up for a free trial](#).
2. Select a destination in the Power BI service where the report will be saved, such as My workspace.

3. Select Open 'your-file-name' in Power BI.

Your published report opens in the browser.

The screenshot shows a published Power BI report titled 'Executive Summary – Finance Report'. The report includes three main visualizations: 1) 'Profit by Month and Year' (Line chart showing profit fluctuating from 0.0M to 2.5M between January 2014 and July 2014). 2) 'Profit by Country' (Map showing profit points across North America, Europe, and South America). 3) 'Sales by Product and Segment' (Bar chart showing sales for four products: Paseo, VTT, Velo, and Amarilla, segmented by five segments: CHANNEL PARTNERS, ENTERPRISE, GOVERNMENT, MIDMARKET, and SMALL BUSINESS). The sidebar on the left shows a hierarchy for 'Year, Month' with 2013 and 2014 expanded, and a 'Filters' section on the right.

4. Select Share at the top of the report to share your report with others.
